

# **MOTUS Wave Sensor 5729**

A directional wave sensor module for use on surface buoys. The MOTUS Wave Sensor is an integrated part of the DB 1750 MOTUS Wave Buoy but also suitable for other third party buoys. It is intended for commercial as well as research use.

### Advantages:

- User flexibility for compensating on third-party buoys on frequency response and installation of sensor outside of buoy center.
- Built-in solid state 9-axis accelerometer/gyroscope/magnetometer.
- Options for external compass ensuring high directional accuracy, even if the wave sensor is installed close to magnetic components.
- A compact field friendly low power multi-parameter wave sensor.
- Wide range of parameters are calculated inside the sensor, configurable output.
- Direct readout of engineering data.
- RS-232 output for integration to most third party Dataloggers.
- Configurable separation between wind and swell waves.
- Extremely rugged and watertight. Handles 30 meter knockdown.

### **Applications:**

• Oceanographic research, Ports & Harbours, Offshore / Oil & Gas, Aquaculture / fisheries, Environmental management, Infrastructure design / Survey companies, Offshore wind.

## Specifications MOTUS WAVE SENSOR
